

Version 3.02 of the AccuFund Accounting Suite has been released. AccuFund, Inc. has reduced the price of the single-user, stand-alone version to \$2,995. It is still fully expandable to include any of the other modules that may be required by an organization. Server-based pricing remains the same, starting at \$4,195.

AccuFund has enhanced the Accounting Suite to provide a table-based account structure as an option. In this configuration each element of the account number has a drop down list of the available values. Other enhancements include drill-to-source capabilities and configurable browses with instant reporting capabilities.
